

# HUB7P QuickStart

## HUB7P

The HUB7P is a powered USB 7-port hub that is perfect for adding high-speed USB ports to industrial computing platforms. The hub is powered by an industrial grade wall-mount power supply providing a full 500mA to each attached USB peripheral. Status LEDs on the HUB7P indicate external power, connection to the host, and fault conditions. The hub is housed in a rugged plastic enclosure and is USB 1.1 compliant and USB 2.0 compatible.

## Installation

### Windows 98/ME/2000/XP/Vista™ Operating Systems

1. The HUB7P is fully supported as a generic USB hub device in Windows 98/ME/2000/XP/Vista™ operating systems and requires no separate driver. The Sealevel Software CD is included only for distribution of the user manual and other literature.
2. Simply connect the included wall-mount power supply to the HUB7P and connect to an AC outlet.
3. Using the included USB device cable, plug the HUB7P into an available USB port on your host system.
4. The 'Found New Hardware' screen will appear and the hub will be automatically recognized as a generic USB hub device.
5. The hub is ready to use when you see the screen 'Your USB hub is installed and ready to use.'

### Linux Support

USB devices are supported in Linux kernel v2.4 or better. Refer to the help files included with your Linux distribution for specific instructions on adding generic USB hub devices.
